

I am outraged that the National Association of Broadcasters would have the temerity to ask our government to protect them from satellite radio but not allowing this new technology to provide traffic and weather information on a local basis.

I choose to pay for my radio service for many reasons, just one of which is the fact that the quality of the programming is so much better. Do not allow the radio establishment to suppress this new form of communication, simply to protect themselves from honest competition. This country was built on competitive forces in the marketplace, please do not allow the NAB to be protected from satellite radio.
